

List of Flipgrid's Subprocessors that handle Student Data

Flipgrid uses a handful of third party subprocessors - other companies that provide software services that help us do business. These companies have access to student data and help us do things like manage our data centers and provide moderation services to keep Flipgrid a reliable and safe platform. Our subprocessors have all signed a Data Protection Agreement with us which stipulates that any data we share with them will be used exclusively to provide services to us and not for any other purposes. Our subprocessors must adhere to Microsoft's Supplier Security & Privacy Assurance program requirements for the duration of the contract. The following lists all subprocessors that have access to student data:

Subprocessor	Purpose	Link to Privacy Policy	Data Storage Location
Azure	Hosts our services	Microsoft Privacy Statement – Microsoft privacy	USA
Amazon Web Services	Hosts our services	AWS Privacy (amazon.com)	USA
CommunitySift	Provides our text moderation services	Privacy Policy	USA
Helpshift	Manages our support requests	Privacy - Helpshift	USA
